Power cord extension with plugs (for DC battery motors)

- ▶ FLAX13W070
Plug-in power cable for XSC50
motor without dry contacts

- ▶ FLAX13W065
Power cable for XSC50
motor with dry contacts

POWER DISTRIBUTION PANELS 24V DC

ARM4

Power supply for 4 XSDC30 motors

Technical details

Input voltage	100-240Vac 50/60Hz
Amps	2.1 A
Output	4.5 A, 100 W
Motor connections	4
Working temperature	-10°F /+158°F
Dimensions	5.236 x 8.188 x 3.149 in

ARM5

Power supply for 5 XSDC50 motors with dry contact input for each motor and for group control

Technical details

Input voltage	100-240Vac 50/60Hz
Amps	3.0 A
Output	10 A, 250 W
Motor connections	5 (DC power) + 5 (Dry contact)
Working temperature	-10°F /+158°F
Protection fuse	4.0 A
Dimensions	12.008 x 8.268 x 4.724 in

XS4EZ

Electronic encoded type
with built-in radio
receiver

SMART
FEATURES

- ▶ Easy limit setting via radio
- ▶ Secure 434.15 MHz radio transmission
- ▶ Easy set up of group controls
- ▶ Up and down directions synchronized while setting the limits
- ▶ Noiseless soft brake

MAIN
FEATURES

Models	XS4EZ334	XS4EZ624

XQ5EZ Electronic encoded type with built-in radio receiver

SMART FEATURES

- Downwards sensitive obstacle detection
- 3 attempts to identify the physical obstacle before stopping
- Smart reaction to gusts of wind: stop/reverse and downwards again
- Overload protection upwards
- Soft touch and slight release at the up limit position
- Continuous fabric length compensation
- 3 setting modes: automatic, semi-automatic, manual
- Self-learning limit positions when set in automatic mode
- Available in **XS** type for the quietest operation

Technical details

Channels	1 to 5
Frequency	434.15 MHz
Power supply	3V mod. CR2032
Battery life	2 years
Radiated power	0,150 mW
Protection rate	IP40
Coverage (int/extl)	65 / 600 ft
Encoding	RC Gaposia
Working temperature	14°F / 104°F

A 16 channel remote with LCD display. Smart16 is the most sophisticated remote of all the range with a unique easy set up procedure and the most user friendly operation found in the market. A simple touch will select what to control between individual channels and groups.

Features:

- 16 channels for individual control
- Possibility to create and control 8 custom groups in addition to all channels
- Hide the unused channels
- Magnetic wall mount bracket

Technical details

Channels	16
Frequency	434,15 MHz
Power supply	3V - CR2450
Battery life	2 years
Radiated power	0,150 mW
Protection rate	IP30
Coverage (int/extl)	65 / 600 ft
Encoding	RC Gaposia
Working temperature	14°F / 104°F
Dimensions	1.85x5,90x0,47 in
Weight	0.14 lb

Sleek, longer ergonomic handheld remote combining elegant design and durability. A body made from an ionomer resin resistant to drops with a "Soft touch" feel is available in translucent, white, and black.

QCTX01KT

QCTX03KW

QCTX04KB

Technical details

Channels	1-5
Frequency	434,15 MHz
Power supply	3V mod. CR2430
Battery life	2 year
Radiated power	0,150 mW
Protection rate	IP40
Coverage (int/extl)	65 / 600 ft
Encoding	RC Gaposia
Working temperature	14°F / 104°F
Dimensions	1,61x7,20x0,39 in
Weight	0.12 lb

Features

- Information securely stored locally
- 3 types of scenarios for an ultra simple set up
- Simple and fast installation
- Vacation scenario with random feature
- Designed for Smartphone, tablets or PC
- No limits to the number of scenes and connected devices
- Autonomous server does not use Cloud technology
- Free remote access without any subscription
- Amazon's Alexa compatible

Gaposa 3rd party integration via dry contacts with: Lutron, Savant, Control4, Crestron

QCTZ3SDU
1 channel

QCTZ36SDU
6 channels

Panels with integrated transmitter enables to interface a radio motors with a home automation system. In this way, the home automation system will control the radio motor(s) through the UP/STOP/DOWN signals.

Power supply	120V~ - 60 Hz (±10%)
Frequency	434.15 MHz
Fuse	315 mA
Protection rate	IP44
Working temp.	14... 140 °F

RS232 integration + WiFi coming soon

linkIT

Models

- linkIT-US8 8 channels (434.15 MHz)
- linkIT-US16 16 channels (434.15 MHz)

Control

- 8-16 blinds or groups per device
- Up - Down - Stop
- Intermediate position
- Tilting

Applications

- Control4 driver
- Crestron via RS232
- Lutron via RS232

Integrations

- RS232 via RJ45
- TC/IP/Wi-Fi (Q1, 2020)

Hardware

- Very small dimensions (80x55x24 mm)
- Visible feedback
- Exterior antenna for increased range
- LED for power
- Upgradable
- Interconnectable
- 5V power input

PROGRAMMING QUICK GUIDE

The buttons shown on the left are used to program the transmitters and specific channels. The programming button's (buttons 4 and 5) locations can be placed differently depending on the transmitter model. Shown in this guide is the Emitto Slim line transmitter.

- UP (1)** the motor lifts the rolling shade/awning up
- STOP (2)** the rolling shade/awning stops
- DOWN (3)** the rolling shade/awning goes down
- SYNC (4)** program the transmitter
- LIMIT (5)** set limits

CONNECT POWER TO THE MOTOR

PROGRAMMING A TRANSMITTER (Sec. 1)

- 1** Press and hold **SYNC** button on the back of transmitter or the white button on the head of the motor until the motor starts moving
- 2** Check the motor rotation (**UP** or **DOWN**) then release the **SYNC** button or the white button (the motor now stops)
- 3** Within 5 seconds, press the corresponding button (**UP** if the motor turns upwards or **DOWN** if the motor turns downwards.) This will set the direction of the motor. If the incorrect button is pressed, the controls will be reversed. To fix, see Sec. 3.

Transmitter is now programmed

ADDING A NEW TRANSMITTER (Sec. 2)

- 1** Press and hold the **SYNC** button on the back of a transmitter **ALREADY** paired until the motor starts moving in one direction
- 2** Check the motor rotation (**UP** or **DOWN**) then release the **SYNC** button (the motor now stops)
- 3** Within 5 seconds, press the corresponding button (**UP** if the motor turns upwards or **DOWN** if the motor turns downwards) on the **NEW** transmitter being added. This will set the direction of the motor. If the incorrect button is pressed, the controls will be reversed. To fix, see Sec. 3.

Additional transmitter is now added

CHECKING / CHANGING DIRECTION (Sec. 3)

To check the direction, press the UP or DOWN button. The motor will go UP or DOWN accordingly, if the direction needs to be changed:

- 1** Press and hold the SYNC button on the back of transmitter until the motor starts moving
- 2** Press the STOP button; the motor makes a brief jog. The direction of the motor has been reversed

IMPORTANT: the change of direction of procedure must be performed before initiating the limit setting procedure, otherwise limits must be reset

SETTING THE LIMITS (Sec. 4) IT IS MANDATORY TO SET THE "UP" LIMIT FIRST EVERY TIME

Run the motor to an intermediate position inbetween the two desired limits. The motor needs to move in the direction of the limit in order for the limit to be properly set.

- 1 Press and hold the LIMIT button on the back of transmitter until the motor makes a brief jog

Note: during "limit setting mode" the operations are in "deadman control" (The UP and DOWN buttons must be held down in order to move the motor.)

- 2 Press and hold the UP button and run the motor to the desired UP limit position.
- 3 Press the STOP button to set the UP limit position. The motor makes a brief jog to confirm.
- 4 Press and hold the DOWN button and run the motor to the desired DOWN limit position
- 5 Press the STOP button to set the DOWN limit position. The motor makes a brief jog to confirm.

Note: Accurate limit setting can be performed by pressing the LIMIT button a second time: the motor will then reduce its output speed, moving slowly in steps towards the desired limit. Always press the STOP button to set the limit position.

SETTING THE LIMITS INDIVIDUALLY (Sec. 5)

If the limits need to be changed after the initial limit setting procedure, it is possible to change the limit positions individually. One limit can be set without the other limit needing to be set. The motor can be in any position to initiate the procedure.

TO CHANGE THE UP LIMIT:

- 1 From any point between the existing limits, press and hold both the LIMIT button and the UP button until the motor makes a brief jog.

Note: during "limit setting mode" the operations are in "deadman control" (The UP and DOWN buttons must be held down in order to move the motor.)

- 2 Press and hold the UP button until the desired new UP limit is reached.
- 3 Press the STOP button to set the limit. The motor makes a brief jog to confirm. The new UP limit is set.

TO CHANGE THE DOWN LIMIT:

- 1 From any point between the existing limits, press and hold both the LIMIT button and the DOWN button until the motor makes a brief jog.

Note: during "limit setting mode" the operations are in "deadman control" (The UP and DOWN buttons must be held down in order to move the motor.)

- 2 Press and hold the DOWN button until the desired new DOWN limit is reached
- 3 Press the STOP button to set the limit. The motor makes a brief jog to confirm. The new DOWN limit is set.

AUTOMATIC SETTING OF THE LIMITS (Sec. 6)

For limits set with torque sensor (mechanical stop of shutters or cassette awnings/shades), press and hold the UP button until the bottom bar hits the cassette or shutter box. A short jog will indicate that the UP position has been memorized. The same procedure can be followed for the DOWN limit but only for roller shutters.

PREFERRED POSITION (Sec. 7)

1. SETTING AN PREFERRED POSITION

Operate the motor to and stop it at the desired intermediate position, then press both the UP and DOWN buttons together until the motor makes a brief jog to confirm.

The intermediate position is now set.

2. RECALLING THE PREFERRED POSITION

Press and hold the STOP button for 3 seconds: the motor will move to and stop at the intermediate position.

3. ERASING THE PREFERRED POSITION

Press both the UP and DOWN buttons until the motor makes a brief jog to confirm.

The intermediate position is now erased.

DELETING A TRANSMITTER OR A CHANNEL (Sec. 8)

Using the transmitter to be deleted press and hold both the SYNC and STOP buttons until the motor makes a brief jog to confirm.

Only the transmitter used for this procedure has been deleted from motor memory

RESET TRANSMITTER MEMORY (Sec. 9) (DELETING ALL THE TRANSMITTERS OR CHANNELS OR SENSORS)

Option 1 - Using a programmed transmitter

Press and hold both the SYNC and STOP buttons for at least 15 seconds: to confirm that the operation has completed, the motor first makes a brief jog and after 5 seconds it makes an additional jog. This operation will not be successful unless it makes both jogs.

Memory is now empty

2

Option 2 - Using a new transmitter without ID (not paired).

1 Switch the power to the motor OFF, then switch it back ON.

2 Within 8 seconds, using any Gaposá transmitter, press and hold both the SYNC and STOP buttons until the motor makes a jog.

Memory is now empty

Option 3 - White button on the head of the motor

Press and hold the white button on the head of the motor until it makes a jog.

All transmitters have been erased.
